## **Back propagation** 1

The formula for estimating the  $\Delta C$  along the activation path  $a_2^{(2)}, a_3^{(3)}, a_1^{(4)}$  is

$$\Delta C \approx \frac{\partial C}{\partial a_1^4} \frac{\partial a_1^4}{\partial a_3^3} \frac{\partial a_3^3}{\partial a_2^2} \frac{\partial a_2^2}{\partial w_{21}^2} \Delta w_{21}^2$$

$$\begin{split} \frac{\partial C}{\partial a_1^4} &= \frac{\partial}{\partial a_1^4} (y - a_1^4) = -y + 2a_1^4 \\ \frac{\partial a_1^4}{\partial a_3^3} &= a_1^4 (1 - a_1^4) w_{13}^4 \\ \frac{\partial a_3^3}{\partial a_2^2} &= a_3^3 (1 - a_3^3) w_{32}^3 \\ \frac{\partial a_2^2}{\partial w_{21}^2} &= a_2^2 (1 - a_2^2) w_{21}^2 \end{split}$$

$$\frac{\partial a_1^4}{\partial a_3^3} = a_1^4 (1 - a_1^4) w_1^4$$

$$\frac{\partial a_3^3}{\partial a^2} = a_3^3 (1 - a_3^3) w_{32}^3$$

$$\frac{\partial a_2^2}{\partial w_{21}^2} = a_2^2 (1 - a_2^2) w_{21}^2$$

$$\Delta C \approx (-y + 2a_1^4)(a_1^4(1 - a_1^4)w_{13}^4)(a_3^3(1 - a_3^3)w_{32}^3)(a_2^2(1 - a_2^2)w_{21}^2)\Delta w_{21}^2$$
